Dear Colleague:

Telemedicine and e-Health is celebrating its 20th anniversary in 2014. Over these two decades, the Journal has been at the forefront of presenting peer-reviewed research, insightful editorials, special issues and other materials that have helped move telemedicine and e-Health forward. We approach the coming year with enthusiasm bringing to our readers the best in peer-reviewed articles that cover clinical telemedicine, technology, international perspectives, policy, and reviews. Telemedicine has become an integral part of the evolving pattern of patient-centered care in a digital format where information supports clinical decision and rich interaction between patients and caregivers. Medicine is moving from incident care to longitudinal care through e-Health, m-Health, and u-Health to support the vigorous lives of tomorrow’s patients.

In 2014, we will bring you special features that highlight the significance of our first 20 years. In addition, we will continue to bring you outstanding peer-reviewed material in the 12 issues per year. Our international board and strong interactions with the largest telemedicine associations in the world - the American Telemedicine Association, the International Society for Telemedicine and eHealth, and the Canadian Telehealth Forum - provide a rich environment. Our review panels, populated with established contributors to the Journal, abound with significant and important experience through their own work and authorities in this field.

In the last year we saw a large increase in the number of submissions and the impact factor of the Journal. The contents are downloaded thousands of times per month, and readership is global. The Journal offers easy electronic access, as well as print articles that are available in electronic format a month ahead of the print production. Turnaround time for authors is a matter of great concern to us and is always kept at a minimum, while time to publication is among the best in the field.

Telemedicine and e-Health seeks randomized controlled trial reports to let our readers know what is effective or not in telemedicine and e-Health. We are keenly interested in articles on new technology that could be useful in clinical telemedicine and communication. Reviews are very popular for our readers. Position papers, guidelines, protocols and international experiences that could be instructive to our readers are always welcome.

Subscribers expect the highest journalistic standards for integrity of our articles, responsiveness to requests, the best in electronic access, and a vigilance to find the best in telemedicine applications to help you in your pursuit of success in the many dimensions of this important field. We are committed to identifying and nurturing the kind of publication that will be an invaluable aid to this evolution. It is our aspiration for this journal to be synonymous with progress toward the medicine of tomorrow.

At the core of our efforts at Telemedicine and e-Health is the subscriber. It is with gratitude for your support and commitment to your needs that we shall go forward in the next year to exceed your expectations as you, the leaders of telemedicine, bring to fruition the hope for a better, healthier world made one by telecommunications and open information.

Sincerely,

Ronald C. Merrell, MD
Charles R. Doarn, MBA
Editors-in-Chief
