Introduction

Chandru P. Sundaram, MD, FACS, FRCS (Eng)

I AM DELIGHTED TO PRESENT THE SECOND VOLUME of the *Atlas of Videourology*. The *Atlas* is a source for comprehensive instruction in surgical technique from experts in the field, including a full-length manuscript with details of surgical steps, instruments, troubleshooting, and review of outcomes using the technique, if appropriate. The accompanying video consists of a video of the entire surgery as well as easily accessible video segments of each step of the operation. Each module has hyperlinks to previously published videos from *Videourology*. Volume 1, with 22 modules, published in 2018, was widely read with **64,950** downloads from readers across the globe.

This second issue has 6 modules with modules for urethral stricture management, laparoscopic partial nephrectomy, and robotic ureteral reimplantation and Boari flap reconstruction.

We are now planning the third issue with up to 33 modules covering all areas of minimally invasive surgery including Endourology, Laparoscopy, Robotic Surgery, and Focal Therapy. The *Atlas* will remain a living online resource that will be updated and revised as techniques and technologies evolve. Please do not hesitate to contact me if you have suggestions for future issues and updates of the *Atlas*.

Stay safe during this pandemic. I look forward to meeting you during more normal times.
